EDUCATION

University of South Carolina - Honors College

Columbia, SC

Bachelor of Science in Computer Science

Expected Graduation: May 2028

- **Coursework:** Data Structures & Algorithms, Software Engineering, Database System Design, Operating Systems, Computer Architecture
- **GPA:** 3.83 / **Minor:** Cybersecurity Operations

WORK EXPERIENCE

Software Engineer Intern

Jun 2026 - Aug 2026

Textron

Augusta, GA

- Engineered end-to-end features across Java/Kotlin Android clients and C# backend services, integrating with embedded vehicle hardware to develop fleet management software and vehicle infotainment systems.
- Developed full-stack MVP for a feature that dynamically calculates “plays-like” distance using real-time weather, terrain, and GPS data, improving user decision-making
- Contributed to a local LLM research initiative aimed at optimizing a \$100K/year cloud API budget by helping develop a testing harness to benchmark model latency and accuracy, identifying Gemma 4 31b as the top-performing local model
- Utilized Azure DevOps to manage project workflows and requirements across Android, server, and embedded teams

Teaching Assistant - Algorithmic Design

Aug 2025 - Dec 2025

University of South Carolina

Columbia, SC

- Led weekly 2-hour lab sessions for a ~70-student data structures course, teaching students technical concepts about core data structures (arrays, maps, stacks, trees, etc)
- Reviewed students' Java code to identify syntax and run-time errors, and guided them through the debugging process until reaching a solution

Software Engineer Intern

Aug 2023 - Jun 2024

Interpixel Studios

Charlotte, NC

- Developed responsive web applications using React, Next.js, and CSS, driving user engagement through intuitive UI/UX and SEO optimization
- Translated Figma wireframes into production-ready UI components in an Agile environment, collaborating with senior engineers and managing sprint tasks in Jira

PROJECTS

Automated CI/CD & Testing Infrastructure

- Built GitHub Actions CI/CD pipeline to automate builds, Vitest test execution, and Vercel deployments for modern web applications
- Developed automated unit and integration tests covering React component states and REST API interactions, preventing regressions before production deployment

Pokémon Battle Simulator

- Built an interactive 6v6 Pokémon battle simulator using Kotlin, allowing users to build customizable teams from an extensive Pokémon database
- Leveraged Object Oriented Programming and the Android SDK to create reusable, maintainable game logic, facilitating rapid addition of new character types and behaviors

TECHNICAL SKILLS

- **Programming Languages:** Java, C#, Kotlin, TypeScript, JavaScript, SQL, C++, HTML, CSS
- **Frameworks:** React, Next.js, .NET
- **Developer Tools:** Git, GitHub, Azure DevOps, Figma, Jira, Microsoft SQL Server, Unix/Linux
